NOTE: The amount of glycated hemoglobin as measured by the HbA1c test may be overestimated

in African Americans and should not be used as the sole parameter of glycemic burden.

Similarly, hemolysis, genetic hemoglobin variants and chemically modified hemoglobin

derivatives (as seen in renal failure, smoking, aspirin use) may also affect glycated

hemoglobin levels.

gastritis and peptic ulcers should be assessed with the patients medical history and clinical symptoms. Results in the equivocal range should be rechecked with a new specimen in 2-5 weeks.

NOTE: The H. Pylori, IgM test was developed and its performance characteristics were determined by BioReference Health. It has not been cleared by the U.S. Food and Drug Administration. The FDA has determined that such clearance or approval is not necessary. This test is used for clinical purposes. It should not be regarded as investigational or for research. This lab has been approved by CLIA '88 and designated as a high complexity laboratory and is qualified to perform this test.
